I have had the pleasure of teaching Tomas Ondrejka in one of my courses at the Software Engineering programme at VIA University College. He participated in the course "Software Development with UML and Java 1". Furthermore, I was the supervisor for one of Tomas' semester projects, where he developed a software product in Java with a group of his fellow students.

From this, I have come to know Tomas as an excellent student. He performed very well in the course and showed a high level of motivation and interest in learning throughout the course. This led to him finishing the course with the top grade. Through the group work in the semester project, Tomas displayed his ability to not only work well independently, but to do equally well when working together with others. Again, Tomas received the top grade for the project.

Tomas gets my highest recommendations.
